sanclean
central vacuum systems

INTRODUCTION

Congratulation for the wise purchase of a state-of-the-art Sanclean central vacuum system. You are now the owner a cleaner with very high technical standards and durability. Sanclean will give you optimal hygiene into your home and will help you to keep it clean, easily and joyfully. We hope in your complete satisfaction in using this outcome of many years of experience and we are sure that it will give you many years of ease and trouble-free service.

The vacuum cleaner is manufactured to approved European standards and accordingly to the determinations of current low voltage - guidelines No. 73/23, with following amendments. The cleaner, its packaging and the related technical folders are marked with the CE sign.

The success of the past years have enabled us to develop a new range of Sanclean central vacuum systems.
Some of the many advantages of this new Sanclean range are:

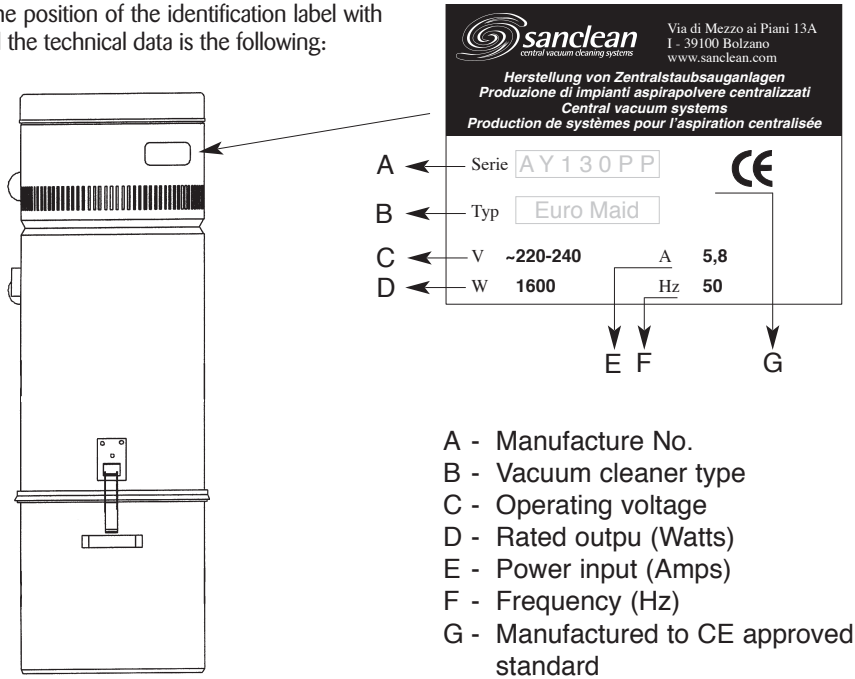
- ☺ Strong suction power
- ☺ Good filtering characteristics
- ☺ Very low noise emission
- ☺ Durable construction
- ☺ Safe 12 Volt switching and screened against radio interference
- ☺ Epoxy coated rust protection as standard

The working reliability of the system is dependant on the person using it. It is therefore important that these persons are aware of the correct operation and maintenance of the vacuum cleaner
The purpose of this manual is to inform the users of the correct operation and so we advise you to read this manual thoroughly before using the system.
Read carefully the content of this book and keep it handy for future reference.

Should the manual become lost, a new manual can be obtained from the local distributor or direct from the manufacturer.
This manual shows the operating techniques that were correct at the time of the sale of the machine. In order to pursue the constant improving of our systems, the manufacturer will keep on researching any product developments and will adequate the manuals.

1.1 Identification label

The position of the identification label with all the technical data is the following:



A - Manufacture No.
B - Vacuum cleaner type
C - Operating voltage
D - Rated outpu (Watts)
E - Power input (Amps)
F - Frequency (Hz)
G - Manufactured to CE approved standard

SANCLEAN-Libretto 4 lingue-1557 9-02-2004 15:26 Pagina 34

2. DELIVERY

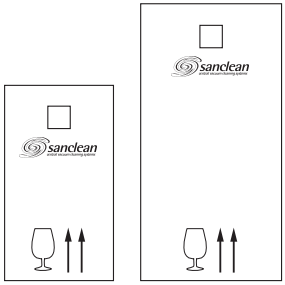
2.1 Inspections at production site and for delivery

Each cleaner leaves our production sites checked and certified, to guarantee the best performance during the work.

At delivery always check the goods and verify that no damage has been happen during the carriage.

2.2 Moving the cleaners

The cleaners are packed in carton box like following:
EUROBASIC: 0,34x0,43x0,80 = 0,15 mq
EUROMAID: 0,34x0,43x0,80 = 0,15 mq
EUROMASTER: 0,34x0,43x1,18 = 0,18 mq
EUROTOP: 0,47x0,47x1,37 = 0,30 mq



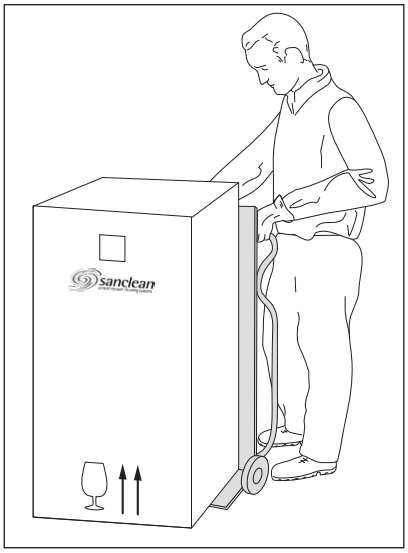
Weight:

EUROBASIC:	**12 Kg**
EUROMAID:	**12 Kg**
EUROMASTER:	**16 Kg**
EUROTOP:	**35 Kg**

Whole pallets:

EUROBASIC:	**12 pcs**
EUROMAID:	**12 pcs**
EUROMASTER:	**8 pcs**
EUROTOP:	**8 pcs**

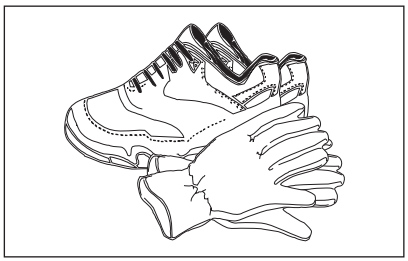
Before and during the moving respect the following instructions:
Handle with care, do not turn, keep dry.
Being the vertical highness of the cleaners



accentuated, if an hand cart is used, check the stability and the position of the load on the forks.
During the burden operations keep the load as low as possible, in order to give the best stability and visibility, then handle with care.

2.3 Unpacking

Remove the strips from the box before open it. To unpack the cleaner do not pull from the cover. Always move and charge the cleaner with care and always use protective attire and gloves.



3. INSTALLATION

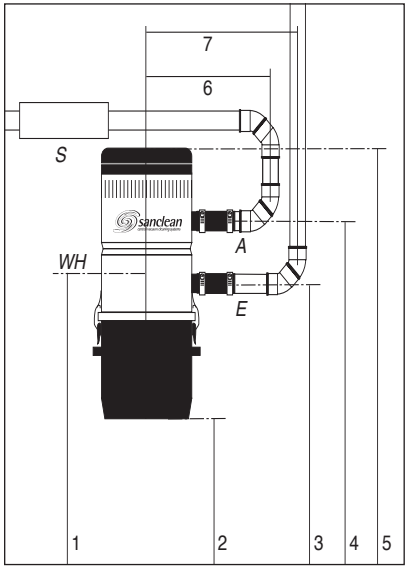
Warning: Although for the mounting and putting on work of the cleaner is better to address yourself to a Sanclean qualified fitter, in this manual you can find the instructions for the do-it-yourself mounting. Follow carefully the instructions and in case of any glitches immediately addressee yourself to a Sanclean authorized fitter or to the Sanclean Technical Office.

3.1 Positioning the cleaner.
The cleaner is installed in the cave, garage or in another service room, where a sufficient ventilation is granted.
Do not install near other warm sources.
It is possible to install the cleaner on the balcony. In this case it has to be protected from the weather conditions.
In any case respect the following minimal distances.

3.2 Mounting
Before installing the cleaner it is necessary to fix on the wall the mounting bar enclosed in the dust container.
Use only the included bar and mount it

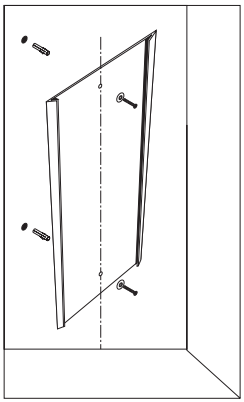
Minimal distances

EUROMAID cm.		EUROMASTER cm.
151~169	1	170~188
108	2	92
144	3	163
157	4	176
178	5	197
33	6	33
47	7	47



E - inlet
A - outlet
S - silencer

ENGLISH

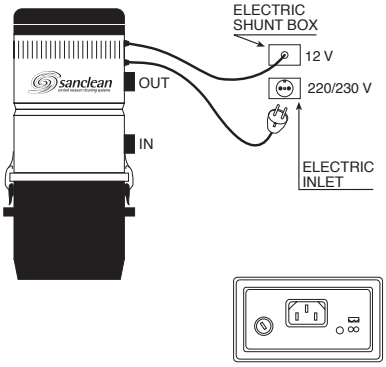


properly, just in accordance to the kind of wall and using the appropriate tools and steal crew:
Install the cleaner on the wall mounting

bar, taking care to the alignment, the stability and the security.

3.3 Connections

- To the inlet tubing through the self strengthen rubber hoses enclosed in the parcel.
- To the outlet tubing through the other self strengthen rubber hoses enclosed in the parcel.
- Low voltage connections: To the branch low voltage cables connected with the micro switches or pin jacks in the inlets. Eventually through the electric shunt box.
- To the feeding (220-230 Volt) through the SCHUKO socket:



In order to prevent the limited electro-shocking danger, these connections are to be made in security and whit adequate tools.

4. STARTING

It is recommended to use the system only for vacuuming household dust.
To avoid possible damages use only Sanclean accessories. Please pay attention to the following security advices:

SANCLEAN-Libretto 4 lingue-1557 9-02-2004 15:26 Pagina 37

4.1 Static shock

In very rare circumstances it may be possible for some people to feel a static shock from the flexible suction hose. These are not caused by the vacuum cleaner but the most likely causes are:

- Very dry air
- Statically loaded carpet (usually synthetic)
- Any person that finds themselves suffering from this problem whilst vacuuming could use rubber shoes or woolen socks to help avoid static shock

4.2 Electrical security

- Use the machine only in accordance to the voltage stated on the specification label - see page 33.
- Ensure electrical appliance is installed into an electrical circuit with correct earthing.
- The security of the electrical installation is only by a current protective switch that corresponds with all current regulations.

4.3 Security of the system

- Ensure correct installation of the complete system before switching on for the first time.
- The central vacuum systems are not designed for vacuuming up cement dust or other building materials therefore it is advisable to clean the system after using it for this purpose.
- Do not expose the system directly to outdoor conditions (e.g. rain, snow, etc)
- Do not vacuum any large materials that are likely to obstruct or damage the flexible pipe.
- Do not vacuum liquids except when using liquid separators.
- Only use original Sanclean accessories.
- Do not start the machine if it is damaged in any way.
- Periodically check the condition of the waste bag and the filter, particularly after a long time with the cleaner out of work.
- Never run the machine without a filter and always use a genuine Sanclean part.

ATTENTION! ALWAYS USE THE MACHINE IN ACCORDANCE WITH THESE INSTRUCTIONS AND NEVER MISHANDLE OR MODIFY THE SECURITIES

Do not open the cover, do not manipulate or prevent in any case the tuning or the protections of the cleaners, or the sealing of the cables.
If should it happen accidentally please contact immediately an authorized Sanclean installer.
The regulation of this devices requires always a professional Sanclean installer.
In case of any intervention or manipulation or opening of the cleaner, any guarantee will immediately expire.

5. USE

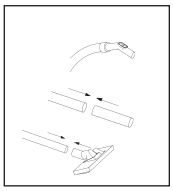
The cleaner is manufactured in order to minimize the output of noise both in the body as in the motor.
During the use pleas pay attention to the following advices:

DANGER WHILST IN USE

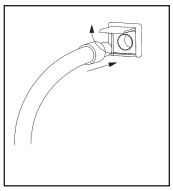
- Do not allow children to operate the machine without surveillance
- Do not allow the suction of the handle to come into contact the eyes or ears. Do not insert fingers in the handle.
- Pay attention to the ceasing of the cleaner. Due to the depression in the tubing and in the motor, the system remains under depression for a couple of seconds after switching it off.
- Disan take no responsibility for any harm or damage done due to misuse of the machine

5.1 Use of accessories

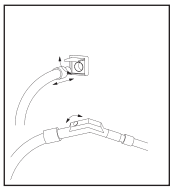
1) Place the appropriate ends together: Into the handle; into the two chrome-plated extension tubes or into the chrome plated telescopic pipe.



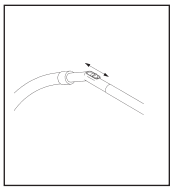
2) Lift the cover of the inlet valve and place the vacuum hose end inside.



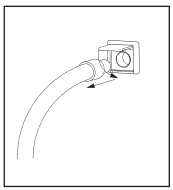
3a) If an automatic inlet valve is being used the system will start when the vacuum hose is pressed into the valve.



3b) If using a semi automatic system, the machine starts when the hose end with the metal collar is placed into the inlet valve or when the switch is operated on the handle.



4) In the event of excessive suction make use of the pressure regulation on the curved connection



5) When vacuuming is finished the machine can be switched off by removing the hose from the inlet valve and carefully closing the cover.

SANCLEAN-Libretto 4 lingue-1557 9-02-2004 15:26 Pagina 39

6. MAINTEINANCE

6.1 TECHNICAL ADVICE

- If during operation you experience an irregularity that is not dealt with in section “maintenance of the vacuum machine” please switch off the machine and get it inspected by a qualified person.
- No maintenance or repair work should be carried out on the machine unless it is disconnected from the mains first.
- We recommend every 2 years a general check of the electric motor, the bearings, cables including a replacement set of brushes if necessary and a new filter should be installed.

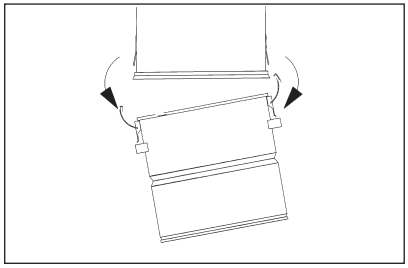
6.2 Ordinary maintenance

All this operations are to be carried out on the machine disconnected from the mains first and when the cleaner is chilled from the surrounding temperature. This maintenance are made to keep the cleaner fit and to extend the lifetime of the cleaner.

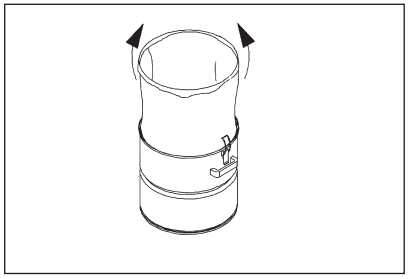
Disconnect the mains first also to clean the cleaner outside and pay attention that the dust canister is properly fixed on the cleaner’s body .

Emptying of waste container

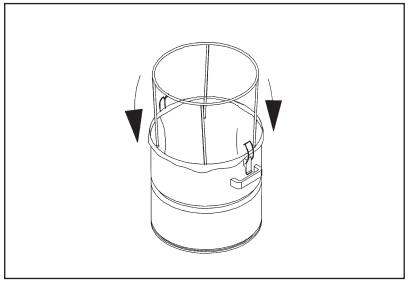
1. To unclip the waste unit from the machine



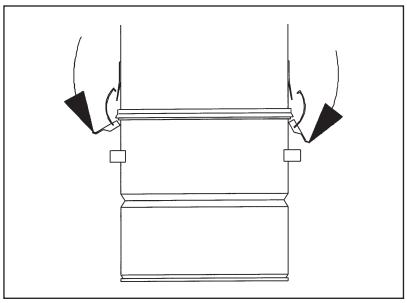
2. To empty the waste container or remove the bag support frame



3. Reassemble the bag support into the waste container ensuring all parts are clean and not damaged.

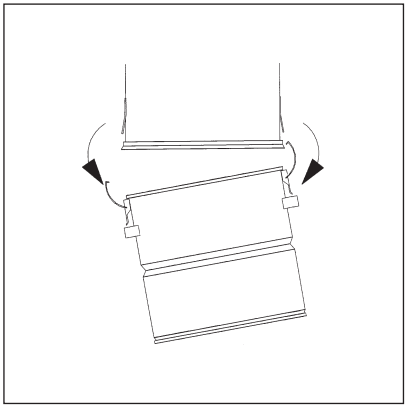


4. Carefully place the waste container up to the bottom of the machine in order to make a good seal.
(Close both clamps together)

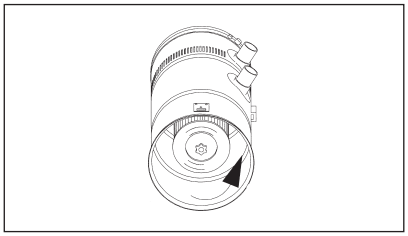


Cleaning of the filter:
Before touching the cleaner pay attention to its temperature, which due to the motor can be high.
Wait until the cleaner is chilled from the surrounding temperature. Then:

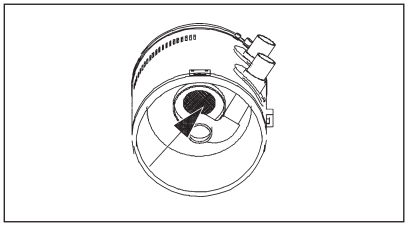
1. Uncouple the waste unit from the machine



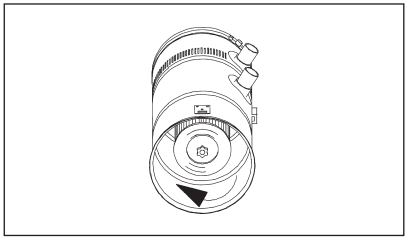
2. For the model Euromaid remove the protection cloth filter and clean it up.
3. For the model Euromaster rotate the finger grip anticlockwise until the filter can be removed, then proceed to clean it using a compressor, traditional vacuum or by a simple shaking motion, being careful not to damage it.



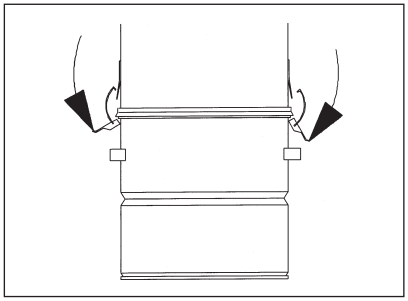
4. Check that the metal motor protection grill is not damaged or dirty (see drawing)



5. Replace the filter into the machine case an retighten the knurled nut.



6. Re connect the container with the machine being careful not to damage the seal edges which would cause a loss of suction (close both clamps together).



7. DAMAGES SOLVING

1. FILTER IS BLOCKED
If suction power at end of the hose is weak check to see if waste paper bag is full or damaged

2. Flexible hose is blocked.
If suction at the inlet valve is correct, the flexible hose could be blocked.

3. Damaged waste container not sealed onto machine correctly
Check the condition of the waste container and check that it is installed onto the machine correctly, in order to prevent loss in suction. Then close both clamps together.

4. Several suction hoses being used at the same time
All single phase systems are designed for use by a single person at a time.

5. Blockages in the pipes
You should contact an official Sanclean installer.

6. Safety protection
The 10 Amp fuse will quickly blow if
- The vacuum motor is exposed to an overload
- The motor becomes detective
- The carbon motor brushes become defective or in need of replacement.

7. Micro Switch on inlet is dirty or faulty
If the machine continues to run with the hose removed or will not run with the hose installed check the operation of the micro switch on the inlet valve if the cause is not found call the installer.

8. Overheating
If the motor becomes overheated due to a blocked filter or a blockage in the pipeline the thermostat will switch the motor off. It will restart when it has cooled down (8-10 minutes) If after you have followed procedures 1 and 2 it continues to overheat please call the installer.

9. 12 volt supply is interrupted
On the rare occasion that the switching cable that connects the inlet valve to the machine becomes faulty, please contact the installer.

10 short circuit
If the motor will not run after checking the previous points the problem is likely to be a short circuit in the system wiring and the installer should be called in.

SANCLEAN-Libretto 4 lingue-1557 9-02-2004 15:26 Pagina 42

11. Damage to motor or control module
If the previous procedures do not start the system the cause is likely to be either the transformer relay or an internal problem with the motor and an installer should be called.

12. Hose with on/off switch is defective
If you are using a system with a flexible pipe containing an on/off switch and you experience problems such as the machine switching on and off intermittently or it will not start or switch off you should contact the installer.

13. Low power in the house
If the system fails to start and trips the main switch in the house it could be that there are too many appliances using the electricity. Too rectify this switch off any non essential appliances.

14. Voltage supply too high or low
Do not use the machine if the household voltage varies by more than 5 % than that stated on the identification plate.

15. Waste container is full
To empty the waste container See page 40.

16. Inlet valve seal damaged or screws not secure
Replace the seal or tighten the screws securely.

8. GUARANTEE

8.1 Terms of guarantee

The guarantee conditions become valid from the date the system was first purchased. Always seek professional advice on installation and maintenance problems. Any attempt by the customer or other persons to modify o repair the system with non original parts will automatically render the warranty void and the manufacturer will not be held responsible for any damage caused either to persons or their property.
The following relieves the manufacturer of any responsibility for warranty:

- Improper Installation
- Improper use of the system or accessories
- Operating against the regulations of the respective country
- Use of non original spare parts failing to observe the operating instructions
- Total or partial inobservance of the present manual

- NOT SENDING OF THE GUARANTEE COUPON

The manufacturer will under the guarantee replace any parts that are found to be defective due to faulty construction. In order for the guarantee to be valid the machine must be operated in accordance with this instruction book.
All defective parts must be returned to the headquarter for inspection in their technical laboratory, and under the terms of their guarantee defective parts will be replaced.
The cost of taking apart and assembly and the transport cost for the faulty part are the responsibility of the purchaser.

The guarantee issued by Sanclean will be valid if the portion which can be separated (see last page) is received by the manufacturer no more than 30 days after the purchase date.
Replacement parts under guarantee will only be issued if the payment terms were kept by the purchaser.
Any disputes will be resolved by the courts in Bolzano (Italy).

8.2 Coupon of guarantee

For the registration of your guarantee right fill in the coupon on the cover of the present book and insert the data reported on the identification label of your cleaner.
Send it within 30 days from purchase.

CERTIFICATO DI CONFORMITÀ

Noi,
Disan S.r.l.
via di Mezzo ai Piani, 13A
39100 BOLZANO, Italia

dichiariamo sotto la nostra responsabilità, che i prodotti SANCLEAN

- EUROBASIC
- EUROMAID
- EUROMASTER
- EUROTOP

ai quali si riferisce questa dichiarazione sono conformi alle norme:

EN55014: 1993 e successive modifiche
EN55016-1: 1993 e successive modifiche
EN61000-3-3: 1994
EN60335-1
EN60335-2-2

In accordo alle disposizioni della Direttiva Bassa Tensione n. 73/23/CEE e successive integrazioni, e in accordo con la direttiva EMC 89/336/EEC con le succ. integrazioni e in accordo con la direttiva macchine 98/37/CE.

Bolzano lì, 9 marzo 2001

KONFORMITÄTS-ERKLÄRUNG

Wir,
Disan G.m.b.H
Mitterweg Boznerboden, 13A
39100 BOZEN, Italien

erklären in alleiner Verantwortung daß SANCLEAN Produkte

- EUROBASIC
- EUROMAID
- EUROMASTER
- EUROTOP

auf das sich diese Erklärung bezieht, entsprichen folgenden Richtlinien:

EN55014: 1993 mit den nachträglichen Vervollständigung
EN55016-1: 1993 mit den nachträglichen Vervollständigung
EN61000-3-3: 1994
EN60335-1
EN60335-2-2

ordnungsgemäß mit den Anforderungen der CE Richtlinien über Kleinspannung - Nr. 73/23, mit den nachträglichen Vervollständigung; und mit Einverständigung der Richtlinien EMC 89/336 mit den nachträglichen Vervollständigungen und mit Einverständigung der Richtlinien 98/37/CE.

Bozen, den 9 März 2001
